

Locking Assemblies

RINGFEDER® RfN 7012

Large transmittable forces and moments

self-centering **without axial displacement** with low surface pressure

Locking Assemblies RINGFEDER® RfN 7012

Explanation

d = Inner diameter (decimal notation)	F_{ax} = Transmissible axial force	T_A = Tightening torque of the clamping screws
d = Inner diameter	p_W = Surface pressure on shaft at given T _A	G_w = Weight
D = Outer diameter	p_N = Surface pressure on hub at given T _A	D_{N min} = Min. hub outer diam. depending of the given hub yield point R _{p0,2}
L = Overall length	n_{Sc} = Quantity of screws	
L₁ = Overall length (without screws)	D_G = Thread	
L₃ = Width of ring	SW = Wrench size	
T = Transmissible torque at given T _A		

Technical Information

- The Locking Assemblies are supplied slightly oiled and ready to use. The values for T, F_{ax}, p_W and p_N apply to Locking Assemblies in delivery condition.
- Surface finishes: For shaft and hub bore R_a ≤ 3,2 μm
- Tolerances: Shaft: k9-h9 · Hub: N9-H9
Max. permissible: Shaft: k11-h11; Hub: N11-H11
- To avoid excessive deformations of the relatively thickwalled thrust rings, the Locking Assembly should be located as symmetrically as possible between shaft and hub bore. If the shaft is smaller than nominal d, the bore should exceed nominal D to the same extent and vice versa. The concentricity quality is determined by the direct centering between shaft and hub.
- If several Locking Assemblies are to be installed the transmission values of the table can be added when the Locking Assemblies are located within a distance of 4 · L.
- The Locking Assemblies are equipped with 12.9 grade screws. A reduction of the screw tightening torque is possible. Please contact our specialists for assistance.
- To facilitate removal, the front thrust rings have auxiliary threads.
- The outside diameter of the hub is calculated with factor C3 = 0.6. (see chapter "Calculation" in Product Paper & Tech Paper "RINGFEDER® Locking Assemblies").
